

CUSTOMER STORY

REGION JÖNKÖPING

Region Jönköping is a health region for 150,000 inhabitants in Sweden. The region treats an average of 4900 patients a day across their hospitals and health centers.

“ - It is important that we use IT as a secure tool in our daily work with patients. We now see the opportunity to offer even more secure and equal care for our residents. With digital documents, we ensure that the right basis is used in our work, and we reduce the administrative burden in the system both when sending out assessments, collecting the answers and compiling the results. Instead, we can spend our time on the patients. ”

- **Micael Edblom**, Director of Health in Region Jönköping

SYSTEMATISES PLANNING, ASSESSING, AND EVALUATION OF PATIENTS' TREATMENT

From manual processes to a comprehensive digital platform

Jönköping region was aiming to centralise the purchase and use of digital health services within mental health and psychometric tests. The Swedish health region did a thorough job researching digital solutions with proper information security handling. CheckWare submitted a bid that led to an agreement.

- Our initial requirement was within mental health, where we need a large number of psychometric tests. This area has been quite unstructured, and we needed to switch from manual processes to a comprehensive digital platform. These data fall under the Swedish personal data legislation, so it is important for us to have control and overview, explains Hans Lafin, project manager in the Jönköping Region.

They found their solution in CheckWare

With CheckWare, the health region got the possibility to gather all patient reported data in one solution, and integrating the digital information into the patient record system, which supported their high level of focus on patient data security.

Patients now answer assessments and psychometric tests on their personal devices at home before their physical appointment with clinicians, increasing patient involvement.

The automatic generation of reports is used for clinical decision support, which clinicians will find in the patient record system before the consultation. It provides easier access to collected patient-reported data, which can also be used for research purposes.

Region Jönköping has three mental health clinics, a habilitation clinic and a child and adolescent mental health clinic within the framework of the project with CheckWare.

By implementing CheckWare, the region will reduce the time spent on collecting patient reported data through assessment tools and psychometric tests.

“ We feel that we have CheckWare's full attention on this, and they take care of everything related to the assessment rights. Our introduction process with CheckWare has raised a lot of attention, and there are many eyes watching us to see if the process is successful or not. The partnership with CheckWare feels genuine, honest, and good. ”

- **Sandra Sollenby**, Business developer in Region Jönköping

“ The region did a thorough job when researching digital solutions with proper information security handling. In our eyes, CheckWare is a great supplier, and they score high on all these levels. It is a basic premise for us when we consider potential suppliers. ”

- **Hans Lafin**, Project Manager in Region Jönköping.

CheckWare is an international software company that has taken a leading position in digital patient participation. Our clinical e-health solution has been developed especially for clinicians who use assessments and questionnaires, who want their patients to be actively involved in their own health.

CheckWare automates the collection, scoring and reporting of assessment results, and can document the entire clinic's outcome.

This provides a high degree of patient participation, raises the quality of treatment and frees up resources.

We are a partner for hospitals, clinics and municipalities offering digital healthcare services to their patients and service users. We deliver solutions with high professional expertise and quality for digital assessments, remote patient monitoring and online treatment programs.

CheckWare is reliable, well-proven and has already been used by 250 customers.
